A NatV masking task

KVP40 reference: 341 residues

Dark marks: illustrative targets; other residues remain visible

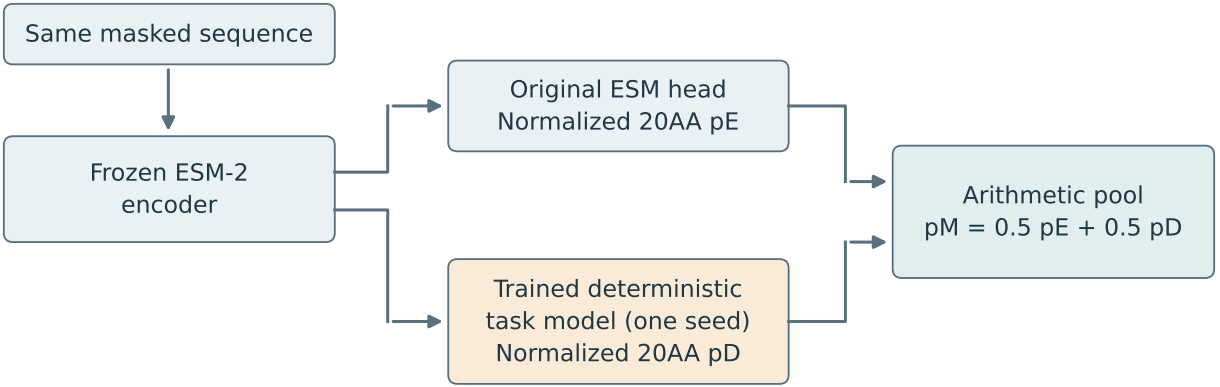
27 panels; homolog-specific coordinates; all panels is weighted

B Original controlled comparison

1,437 external/self fragment pairs: matched target columns and budgets

	QVAE	Deterministic
No auxiliary stage	3 pipeline replicates	3 pipeline replicates
Self fragments	3 pipeline replicates	3 pipeline replicates
External fragments	3 pipeline replicates	3 pipeline replicates

C Exploratory mixed prediction: existing no-auxiliary task weights



Mix and score each seed separately; then average scores

Prior six-cell generation is separate from the mixed predictor
